

**ELECTRONIC DEVICE WITH IMAGE CAPTURING AND METHOD  
THEREFOR**

Abstract of the Disclosure

5

An electronic device (100,200) includes an image capturing means (245) and a sensor (240), each coupled to an image manager (255). The image capturing means (245) captures an image. The sensor (240) determines an orientation of the captured image. The image manager (255) is adapted to change the orientation of the image to  
10 create a rotated image using the output of the sensor (240). The electronic device (100,200) further includes a display (230) coupled to the image manager (255) for displaying the rotated image.
